

Our products are made from recycled materials or from renewable and sustainable sources that do not harm the environment whether in their production, use or disposal. Basically REUSE is to use back the materials in their original form instead of throwing them away. This leads to source reduction and waste prevention. When we reuse, we REDUCE. Reduce is to cut the unnecessary waste and to minimise the consumption of new sources. Then we RECYCLE. Recycling is the process by which materials are collected and used as raw materials for new products. And REPLACE the products which are safer and eco friendly for our environment. By replacing the products which is more durable rather than disposable one can help to save energy and resources. Then RECOVER is to convert waste into resources. Resource Recovery occurs after reduce, reuse and recycle have been attempted.

Going green to be a lifestyle choice with decisions and actions are based on working to save the world is something we can easily strive to do. The simple way is to use eco products to promote green living that help to conserve energy and also prevent air, water and noise pollution. They prove to be boon for the environment and also prevent human health from deterioration.

With our new, aggressive advertising campaigns covering print, online, exhibitions and events in full swing, the demand for ECO-friend products is growing. Our brand with its strong retail history, great product range, quality and competitive pricing represents an excellent opportunity for potential dealers/distributors.

**Don't miss out on the opportunity to be a part of one of the most reputable dealer networks in the Malaysia!**

# Felt

Felt fabric is generally produced by condensing either natural fibres or artificial fibres. As for eco-friendly felt, polyester fibre from reprocessed plastic bottles is used instead. The distinctive characteristics of this material allow it to be widely seen in the eco bag manufacturing. Discussing on its outlook, felt bag is of a fixed shape and is highly resilient where it springs back to its designed shape even after it is compressed. This feature rescues thousands of ladies with the habit of stacking bags, who often turned bag out of shape by piling up one after another in the aim of saving storage space. Besides, felt bag also has a clean cutting edge, making it appears neat at all time. Among its other winning features are high fluid permeability and great thermal insulating nature.

## Non-Woven

Non-woven fabric, in literal, tells that it is not made by weaving, nor it is by knitting. You may then wonder how it is produced. Non-woven fabric actually uses either machine, chemical, or thermal heat to join up tiny fibres and here forms the fabric. It is often being classified as an ecological fabric as it is recyclable. Of course, its new life is only formed after going through appropriate treatments. Commonly used in the medical and engineering field, it is now easy to also pick up its scent in the bag manufacturing.

Seeing and getting a non-woven bag in Malaysia is as easy as pie. It is in great demand due to its distinctive features that few others fabric can replace. Non-woven bag is flame retardant, meaning that it has the ability to delay fire from further spreading, increasing its safety value. Non-woven bag is also liquid repellence. Additionally, non-woven fabric is a bacteria barrier, making non-woven bag comparable more hygienic than any other.

# Canvas

Canvas is a dense and heavy plain-woven fabric, thus it has a significant amount of sturdiness. There are lots of raw materials which canvas can be made of, but cotton is often among the most popular ones as it gives a great volume of softness. Combining its natural characteristics of being durable and soft in handle, it is of no doubt that canvas is suitable to be made into bags.

By having a canvas bag, you no longer have to tolerate with bags that are easily worn out. A plus point, it is washable, so you don't have to worry about not being able to remove the stain you accidentally left on it. Not to be forgotten, our canvas bag is an eco-friendly product, so you are contributing to saving the environment by having it in hands. We have a series of canvas bags, vary in designs, to suit your individual needs.

# Linenette

Linenette is known to be the world's strongest natural fiber. It is known to have similar texture with Jute. It is thicker than cotton and linenette has variable lengths, most of which are very long. This contributes to strength and longevity of its product. Linenette lasts a very long time. Linenette is known to gain strength when it is wet. It has the natural ability to prevent bacterial growth. Linenette reacts to the seasons and the body in contact with the cloth to give the best of all circumstances.

# Jute

Jute is decomposable in nature as it is made up of plant fibres. This statement also implies that jute is less likely to create waste, therefore saving the earth from being further polluted. For decades, this eco-friendly material has been widely use in the bag manufacturing. Generally, jute bag has a great vogue for it is of very soft texture and its thread does not break off easily. It is also a good thermal insulator where any item placed inside the jute bag is less likely to be affected by the high temperature from the outside.

# Juco

Juco is an unique natural material made from a blend of 70% jute and 30% cotton. The surface is much smoother with the good hand feeling touch. Juco widely become another eco alternative to cotton canvas. It is stronger and reusable and has a low carbon and water footprint, hence lower ecological impact.

# Nylon

Nylon is a synthetic fabric made from petroleum products. It is lightweight and provide incredible tensile strength, durability and resistance to damage. It also takes dye easily, making nylon fabrics available in a wide array of colours for consumers. Nylon is a flexible textile and as a result, it appears in a wide range of applications, from clothing to climbing equipment.

# 600D

600D is a synthetic (petroleum-based) fiber with a high-strength, excellent resiliency, high abrasion resistance, and low absorbency (so the fibers dry quickly). It is smooth and lightweight and resistant to creasing, stretching, shrinking and mildew. It washes well and is not damaged by sun or weather.

600D is also wrinkle resistant and is used very often in everyday clothing. It has many uses for homes and industries as well.

## Recycle Paper

Recycle paper, in simple explanation, means paper made with the use of fibre from waste paper. Instead of being a trash, waste paper in this way is processed and given a brand new life. Contrary to the conventional method of producing paper from the fibre of raw wood, recycle paper directly generates impacts in reducing the number of tree needed for paper manufacturing and saving up a considerable amount of energy consumptions.

It is common to see the use of recycle paper in the packaging industry, thus it should not come as a surprise to stumble upon a recycle paper bag. As compared to plastic bag, recycle paper bag has a solid shape, thus it is more presentable. Needless to say, recycle paper bag which falls under the category of eco bag, is more environmental friendly when it is to be set side by side with plastic bag.

# ECO Stationery

## Recycle Paper

Recycle paper is now widely used to make stationery, such as pen, pencils, notepad, etc. It is a green material to use as we know the stationery consumption is quite high every year.

## Bamboo Pen

The eco-friendly bamboo pen which its barrel is made from bamboo, a member of the grass family, which is one of the quickest growing plants in the world. Bamboo pens give the feeling of nature. It is recyclable, lightweight, strong and stable.

## Green Living Product

Making sustainable choices are an important component of green living. Fortunately, green living is rapidly growing in popularity. There are plenty of green living product options that can be implemented in your living in order to create a great look while remaining eco-friendly. Not only will you be doing your part to conserve and protect the environment, green living is better for your health and can save you money in the long run.

# Bamboo Towel

Soft for Skin, Friendly for Nature

Bamboo towels are made from bamboo fiber. The Bamboo plant is naturally antibacterial, so it is grown without pesticides, it can be spun into yarn without harsh chemical treatments. Softer and more absorbent than cotton, cashmere or silk, bamboo towels are completely biodegradable.
